CloudHealth from Telstra

Overview

Managing public cloud infrastructure is a challenge for most businesses.

CloudHealth from Telstra is a centralised data analytics platform that provides analysis, trend reporting and recommendations on the cost, usage and performance of all your cloud services in the one place.

Using these deep data insights and actionable recommendations, CloudHealth unlocks the ability to simply and effectively make informed decisions regarding the management and optimization of your cloud environment.

CloudHealth from Telstra is available through Telstra Cloud Sight®.
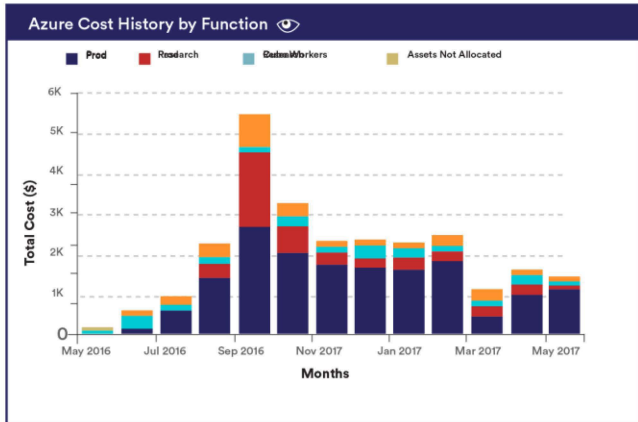

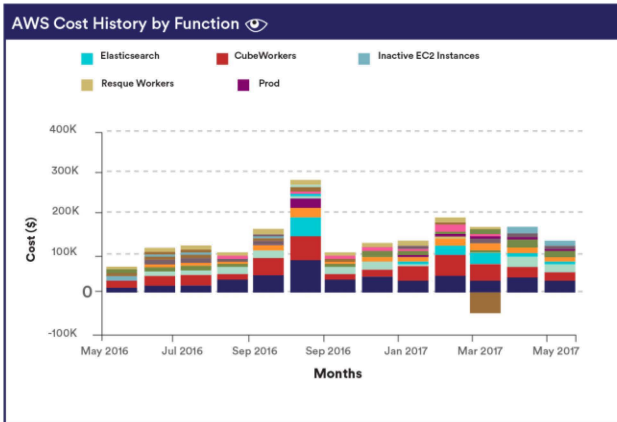

Features	Benefits
Consolidate all your data sources from your cloud services in one pane of glass. • Ingests a variety of cloud data sources into a single centralised data analytics platform.	• Obtain a single view of all your cloud services. • See the context of the different data sources of your cloud infrastructures.
Flexible reporting and detailed analytics that provide meaningful insights. • Deep insights of cloud spend, usage and performance that can be customised by assets, department, location, owner etc.	• Evaluate your cloud network by analysing, visualising and assembling data from a business perspective. • Get the information you need to make informed decisions.
Manage & Optimise with integrated recommendations. • Actionable recommendations for optimization, status reporting, anomaly detection, and troubleshooting.	• Effectively manage your public cloud resources. • Pinpoint areas for improvement. • Optimise your cloud configurations, usage and cost.

AWS Cost

$145,657.52 Current	$222,141.78 Last Month	$246,707.50 Projected for Month
		601 (54) EC2 RIs (% of Total)

Azure Cost

$1,487.21 Current	$1,657.48 Last Month	$2,642.08 Projected for Month
		($4,345.64) Burndown Balance

AWS Cost History by Function 👁

Why Telstra

Telstra Cloud Sight
The Telstra Cloud Sight platform is an easy to use web-based cloud portal that enables customers to manage one or more of their public clouds (Amazon Web Services, Microsoft Azure) and associated network connectivity. It offers budget and cost analytics, account provisioning and builds, user management, compliance with best practice blueprints and cloud connectivity management.

Cloud choice and flexibility
As a multi-cloud provider, we offer choice and flexibility with a range of leading private and public cloud platforms, plus a thriving Telstra Apps Marketplace to enable a complete cloud strategy for your distinct business needs.

We partner with the best
Our extensive national network of expert cloud and network partners can tailor solutions to address your IT workloads and platform preferences, or help design, build, transition and operate cloud solutions for peak performance and business results.
