

## Telstra Connected Supply Chain Domestic Visibility – Transporter Solution

# End-to-end visibility of your freight in transit across your network.

Australia's supply chain is highly inefficient with goods typically moving up to seven times domestically before consumption. Complexity is increased from poor data quality and limited visibility across the road and rail networks.

Telstra's Domestic Visibility (Transporter) solution is an all-in-one solution that:

-  **Reduces manual processes**
-  **Integrates multiple data sets (e.g. ERP, assets & telematics)**
-  **Provides visibility between partners, vendors and suppliers**
-  **Delivers near real-time predictive ETA**
-  **Improves customer experience & operational efficiencies**

Telstra has combined intelligence in Networks, Internet of Things, Telematics & Asset tracking to deliver Domestic Visibility - a single source of truth for tracking & reporting road and rail freight movement across Australia. Focusing on 'at risk' orders allows proactive management of freight and predictive decision making across your business.

### Core Features

- **Predictive ETA on all your freight orders** - track shipments, PO's, consignments, trailers & wagons with an ETA against booked time slot
- **Order management by exception** - receive alerts & notifications on 'at risk' orders which will not meet their booked time slot
- **Custom notifications** - select flagged orders & be notified when their status changes or when a milestone is reached
- **Incorporate multiple data sets** - leverage ERP, telematics & asset monitoring devices to provide near real time visibility on your orders
- **System & process agnostic** - simple deployment allowing integration into IT systems & processes

### Key Benefits

- **Make better decisions faster based on timely, accurate data** - including historical analysis and near real time freight data
- **Improve customer experience and response times** - predictive ETA updates help you to proactively manage customer communications
- **Reduce operational costs** - end-to-end visibility will help your business to plan & forecast labour, storage & transport more efficiently
- **Reduce penalties** - near real-time forecasting will help to reduce late penalties & detention costs
- **Assisting your chain of responsibility chain & communication** - reducing partner and supplier friction through greater transparency

Telstra is looking for early engagement and beta solutioning with Transporters and Freight Forwarders as potential lighthouse customers. Contact your IoT specialist for more information.
