Our Incident Response (IR) Consultancy extends much further than just traditional ICT

The broad range of business and technology issues and underlying challenges highlight the growing need to establish an integrated, end-to-end cybersecurity roadmap - backed by cloud security investments in people, processes, policies, practices, and technology.

Telstra State of Cloud Security Report 2021

What is Incident Response?

Incident Response (IR) refers to a framework or playbook which an organisation can follow to ensure cyber incidents are identified and responded to, via an effective and efficient repeatable process.

Why be prepared for a cyber incident?

Being planned and ready for a cyber incident builds a strong foundation for an organisation to act effectively and efficiently should a cyber incident occur.

How do we assess incident response readiness?

Purple offers an affordable assessment performed by expert security consultants. The assessment is formulated to review the people, processes, and technology you currently have in place to better prepare you for a cyber incident.

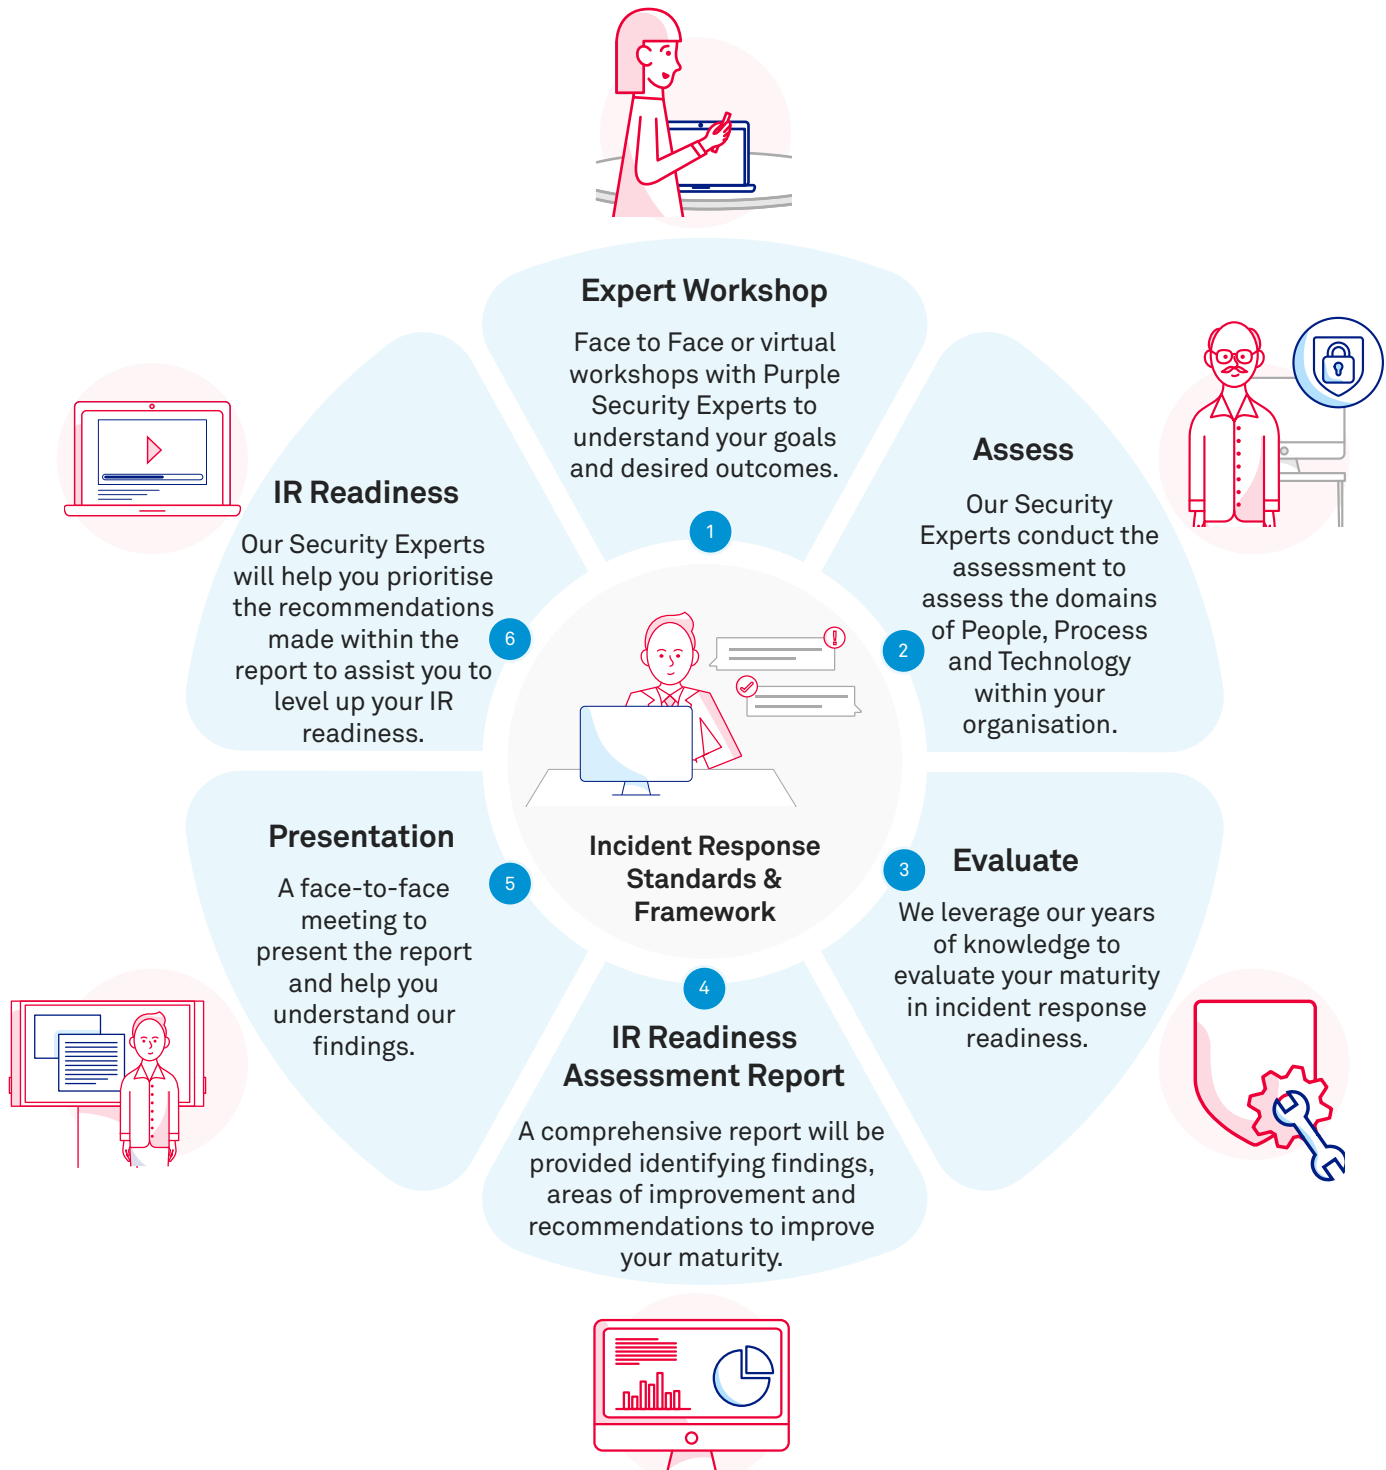

Being prepared will save your business time, money, your reputation and ultimately, your customers

William Baltyn – Principal Lead Incident Response, Telstra Purple

Incident Response Readiness Assessment- What's included?

The Incident Response Readiness Assessment allows you to review and uplift areas within your organisation, so you are ready for any cyber incidents. The assessment focuses on all aspects of people, processes and technology within your organisation and provides you with recommendations to mature your position when preparing for and responding to a cyber incident.

A Purple Security Expert will assist your team with understanding the recommendations needed to improve your organisations maturity and provide a detailed report with findings.
